Dear colleagues,

On behalf of the organising committee we would like to welcome you to this year's meeting. We have put together a varied scientific program and hope that everyone finds something of interest.

Medical and indeed all scientific progress is a slow upward slope towards better understanding and improved health care of our patients. On occasion, along the way, an event occurs that result in huge leaps of change that alters our way of thinking and managing patients forever. These events may be the result of a genius idea but more often than not are the result of the perseverance and hard work of a group of people over many years. Sometimes changes and discoveries are purely chance or accidental findings that someone had the vision to recognise.

What is almost certainly always true is that as the years pass we tend to forget these pivotal innovations and take them for granted.

In this year's meeting we aim to recall some of these "Game changing innovations" and through them try to provoke discussion, new ideas and hopefully inspiration for the next generation of innovators.

Our social program, as always, will give us the opportunity to enjoy each other's company and strengthen our friendship.
